

Connected Vehicle Services

Automated Vehicle Payment Solutions

Consumers recognize the potential for connected vehicle services to improve their driving experience. Verra Mobility is leading this evolution with innovative software-driven tolling and vehicle-centric payment solutions that deliver unique service offerings and greater value to OEMs and their customers.

Verra Mobility Connected Vehicle Services are built on a flexible, cloud-based platform with a technology-agnostic design. This provides fast service integration and customer onboarding through a plug-and-play approach that is customizable to meet your specific needs.

Backed by decades, trusted by millions.

Solving the Complexity of Nationwide Tolling with Connected Technology

As drivers encounter more toll roads with complex pricing models, various account types, minimum balances and hardware requirements that vary by state/region, the need for a simple, seamless, automated and nationwide solution has never been greater.

Verra Mobility's connected tolling service is the solution to this complexity by providing a seamless, automated nationwide toll payment solution with near real-time messaging transparency, no additional device requirements and no minimum balance required, making toll payments effortless and creating a better driving experience.
